Conclusion:

The project execution phase for the "To Supply Leftover Food to the Poor" initiative successfully transformed a real-world social challenge into a functional, scalable Salesforce application. Through the structured creation of custom objects, relationship mapping, automation via flows and triggers, and real-time reporting through dashboards, the system enables seamless coordination between donors, NGOs, and volunteers.

Every component—from data setup to user interface and sharing logic—was carefully implemented to ensure transparency, efficiency, and accountability. The execution phase not

only delivered a working application (FoodConnect) but also laid the groundwork for future scalability and impact measurement, effectively bridging the gap between food surplus and hunger relief.
